New Horizon X F2 Pink Seedling

This deep rose pink self, with a bright tangerine red beard, is a new color in Iris — "Bengal Rose" in the R. H. S. Color Charts.

The flowers are large and have a thickness of petal seen in few Iris. The haft is very wide; free from markings. Falls are round and flaring with a rippled edge. Standards are well formed and hold together firmly. The form of this flower is near perfection. Flowers are well spaced on a strong nicely-branched 36-inch stalk. Plants are large and vigorous, with good foliage. The pollen is fertile, and seeds are produced in abundance. Mid-season. H. C. 1950.

A very fast increaser and vigorous grower. Mid-season. H. C. 1950.

Truly Yours \$20.00

No. 46-35 — 44-43 X Zantha

(1949)

A truly new flower and combination of color in the Iris world. Truly yours produces the largest flowers I have ever grown, but in spite of their great size there is no sign of coarseness. The buds are bright yellow because the under side of the open fall is yellow and the top side is faced with white. The heart of the flower is bright yellow, which shades off to almost white at the bottom of the falls and the top of the standards. Both standards and falls are ruffled. The haft is very wide with gold threads radiating from the yellow beard. Falls are almost horizontal, and standards do not open. It blooms very late in the season; is winter hardy; 38 inches tall. Has fertile pollen, and sets seeds freely. H. C. 1949.
